

## HIGH PERFORMANCE BRAKE PADS

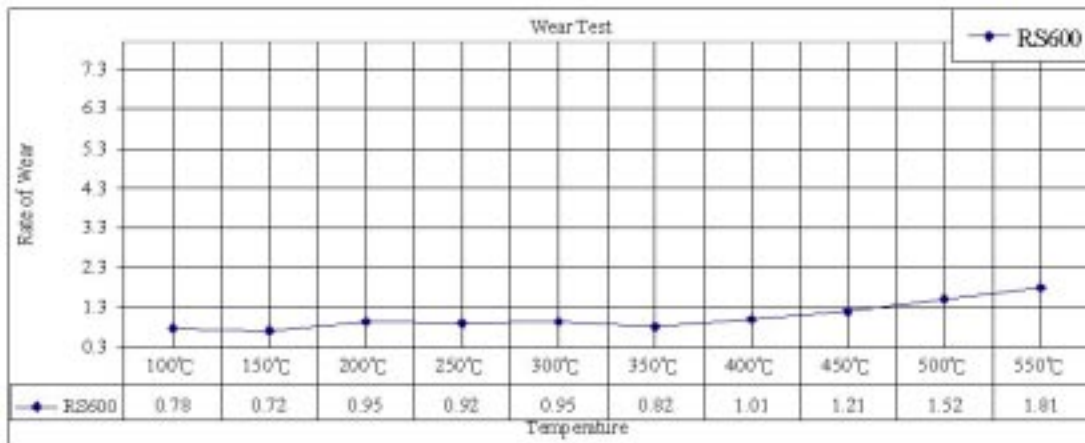

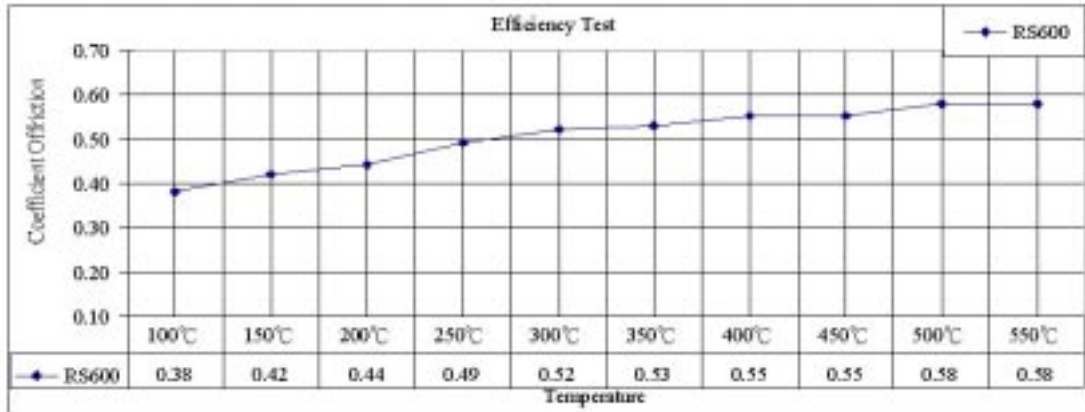

ELIG brake pads are made under strict ISO9000/QS9000 quality standards. Two compounds are available **2021** and **RS600**.

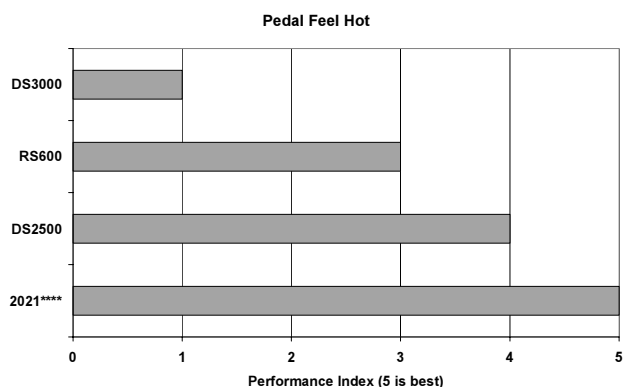

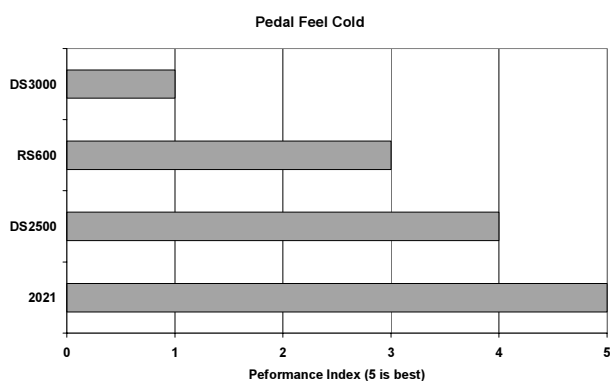

**2021** is a high performance street compound which can also be used for short duration event's such hill climbs, khanacross and 1-2 lap sprints on low speed circuits. See performance graphs below.

**RS600** is a ceramic fibre high performance track day competition compound that is streetable. See performance graphs below.

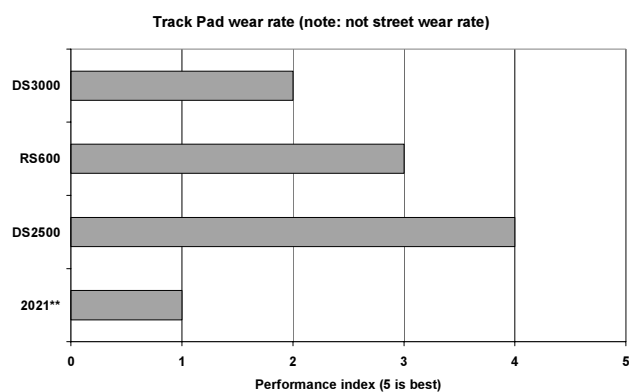

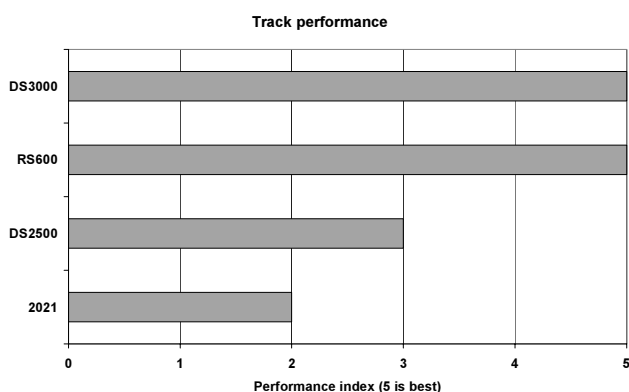

## FERODO Comparison Guide

\*\*\*\*\* 2021 (feel great right up until max temp reached)

NOTE: RS600 not as bitey as the 2500's but very consistent when you're pushing them.

\*\* 2021 (wear is high on track, pretty much like with any street pad)

### Noise

RS600 the occasional squeak when you're being soft on them but nothing to worry about on the street. 2021 is a low noise compound.

### Dust

2021 is a low brake dust compound.

### Disc wear rate

RS600 similar to DS2500. 2021 little disc wear.

### Sizes currently available

Brembo front and rear (EVO, Subaru)  
Subaru 4 pot (front only)  
VR4/EVO1-3 (front only)
